

Candidate: **Betty Penske** Assessment: Recreation Worker (Spanish) Completed: May 7, 2024 Prepared for: Susan Bookman HR Avatar Data Collection Account

Test Results and Interview Guide

The Recreation Worker (Spanish) assessment measures key factors related to high performance and tenure in this job. Attribute types measured vary by test, but can include cognitive ability, skills, knowledge, personality characteristics, emotional intelligence, and past behavioral history. This report includes a one page summary, followed by detailed results with an embedded interview guide. Note that these results should always be used as a part of a balanced candidate selection process that includes independent evaluation steps, such as interviews and reference checks.

Comparison

Percentile scores indicate how the candidate compares to other test-takers within various groups. The candidate scored equal to or better than the fraction of test-takers indicated by the percentile.

Assessment Overview

This assessment provides scores for a number of important factors and competencies that are related to success on the job. Scores are presented based on their potential impact on job performance.

Scores are presented individually on a scale of 0-100. In most cases, including the overall score, higher scores represent higher expected job performance. However, for some competencies, either extreme low or extreme high scores indicate a risk of lower performance. Refer to the interpretation section of each competency for additional information.

Individual competency scores are also combined into a single overall score. Please note that individual competencies are weighted differently, depending on their type, and on fine adjustments based on data from the US Government's Occupational Data Network (O*Net).

Each competency measured includes one or more suggested interview questions, in an easy-to-use format. These questions should be used for additional probing, especially when the score shows an area of relative weakness.

Some of the competencies measured evaluate preferences for doing (or not doing) specific activities. Scores for these competencies can be used to evaluate job-fit.

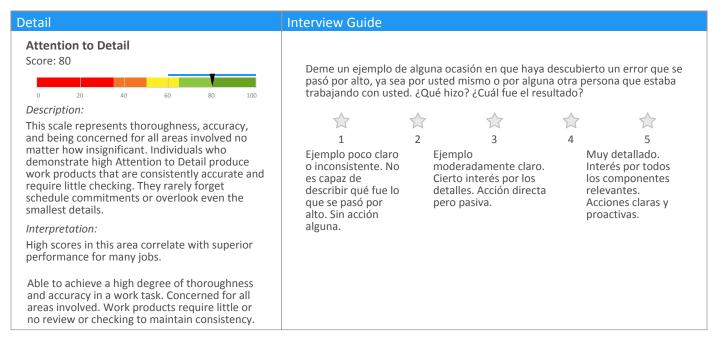

We wish to emphasize that the data contained in this report should be used as part of a comprehensive process for evaluating job candidates. Additional data should include in-person interviews, job tryouts, resume review, and background checks.

Detail

Candidate:	Betty Penske, bettypenske@yourcompany.org
Assessment:	Recreation Worker (Spanish)
Authorized:	May 7, 2024, by Susan Bookman, HR Avatar Data Collection Account, sue.bookman@richardson.biz
Started:	May 7, 2024, 12:48:27AM EST
Completed:	May 7, 2024, 12:48:27AM EST
Overall Score:	72

Cognitive Abilities Detail

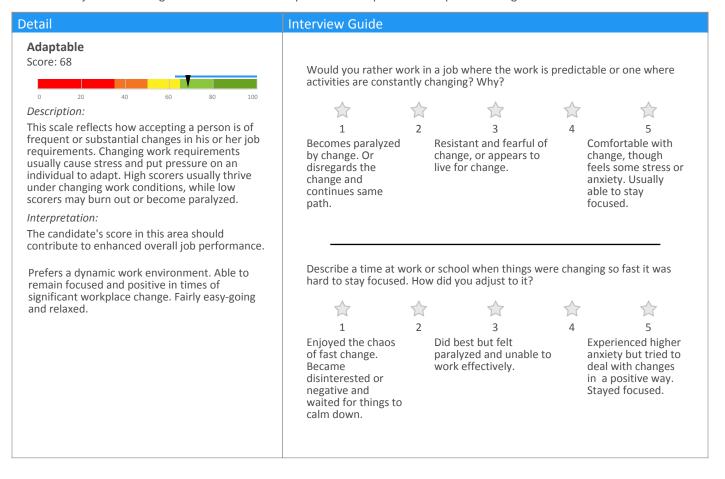

This section contains a list of job-related cognitive abilities that have been evaluated in a job-like context using HR Avatar's simulation technology. Studies have demonstrated that cognitive abilities are highly correlated with job performance for many jobs. Abilities also correlate with problem-solving and the ability to learn quickly.

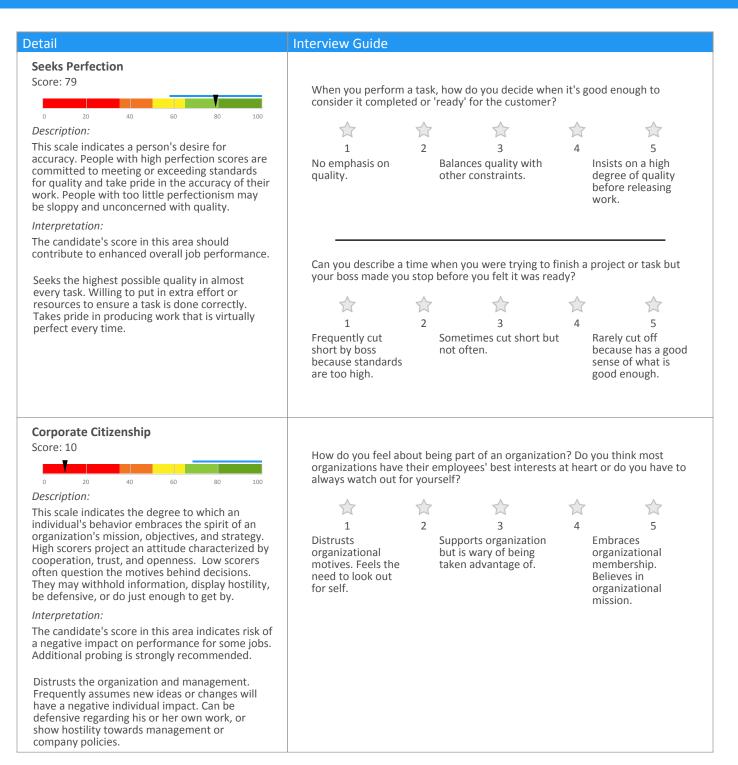

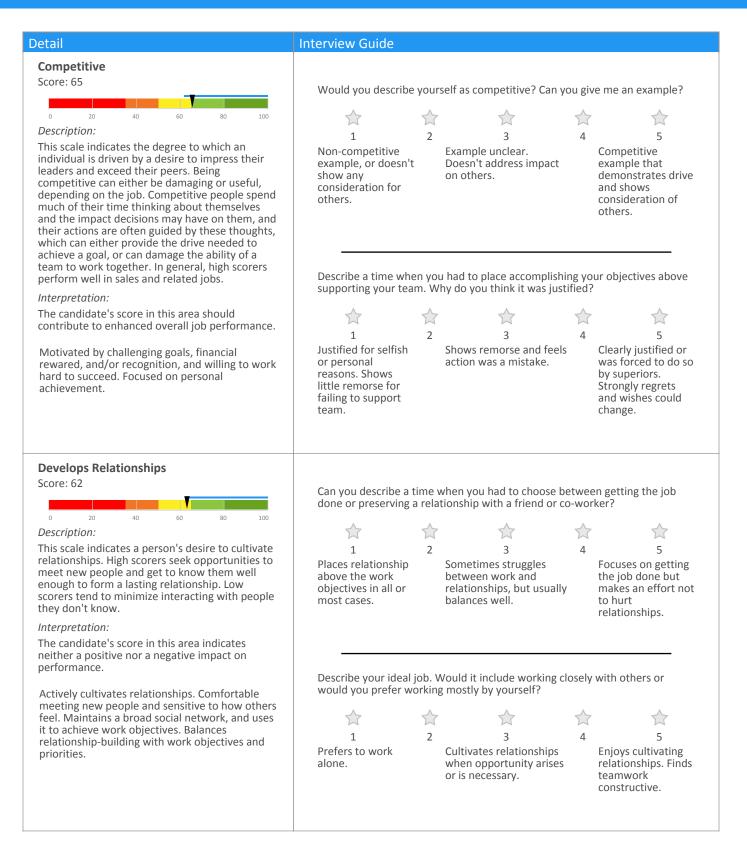

nalytical Thinking core: 74				
0 20 40 60 80 100 rescription: his scale indicates the capacity to think in a noughtful, discerning way, to solve problems, tilize resources, and analyze data. Individuals who demonstrate high amounts of analytical ninking are able to recognize patterns rapidly, avigate through problems, and resolve difficult roblems systematically. https://document.com/systematically. https://docu	e challe	roblem, situation, or pla enges, and how did you 3 Example is moderately complex. Shows some analytical thinking and problem solving. Actions have mixed or limited effectiveness.	overco A	
Isually able to think in a thoughtful, discerning vay. Capable of solving difficult problems,				

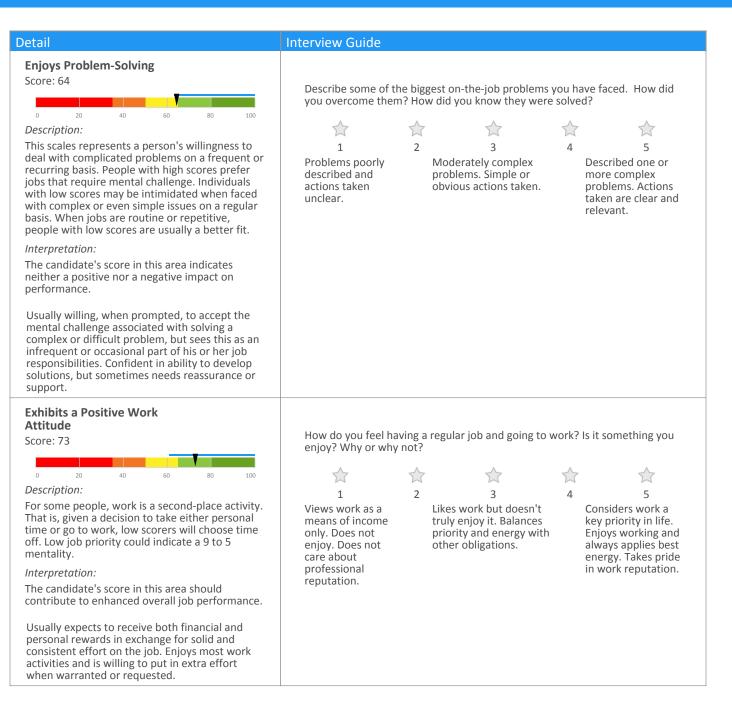

Personality Characteristics Detail

This section contains a list of personality characteristics that are frequently associated with job performance. Remember, these are not skills and do not indicate the ability to do a job. Rather, they can be used to evaluate the candidate's fit with the general needs of the job and the organizational culture. Sample interview questions are provided to gather more information.

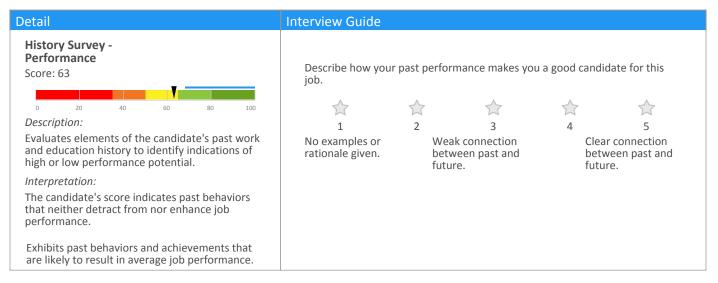

Detail	Interview Guide				
Needs Structure Score: 77 20 40 60 80 100 Description: This scale indicates the degree to which a person prefers to work within an ordered environment, with well-defined tasks, activities, rules, processes and expectations. It also reflects the general thoroughness and care applied by the candidate when performing work tasks. Interpretation:	Have you ever had to one told you what to 1 Large mismatch between comfort with structure and structure level of intended job.	o do? What did 2 Some mis between structure	or didn't you li কি 3	ike abou	ructure or where no it it? 5 Comfort with structure matches the structure level of the intended job.
The candidate's score in this area should contribute to enhanced overall job performance. Follows rules consistently. Makes decisions thoughtfully. Usually follows through on commitments. Usually able to create and/or follow detailed plans.	What kind of job we need to do each day and have to decide 1 Prefers a dynamic, changing work environment.	y or one in which what to do base 2	n you start eac d on circumsta 3 omfortable wit red and work	h day w ances? ' A 4	ith a blank slate

Behavioral History Detail

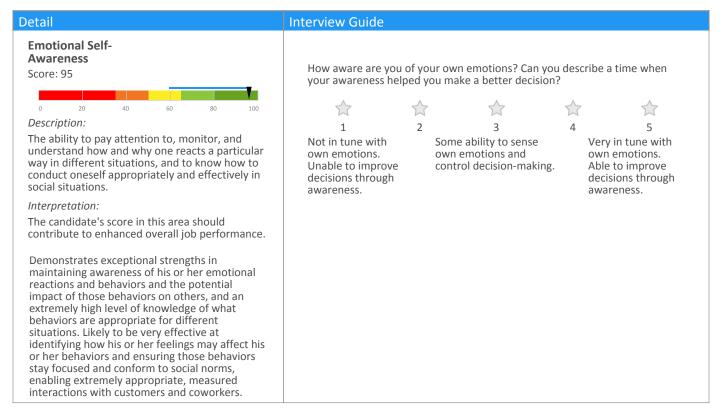

This section evaluates answers the candidate gave concerning his or her work-related history. Studies often show that a candidate"s past behavior often indicates his or her future behavior. Potential caution areas (if any) are specified in each detail section.

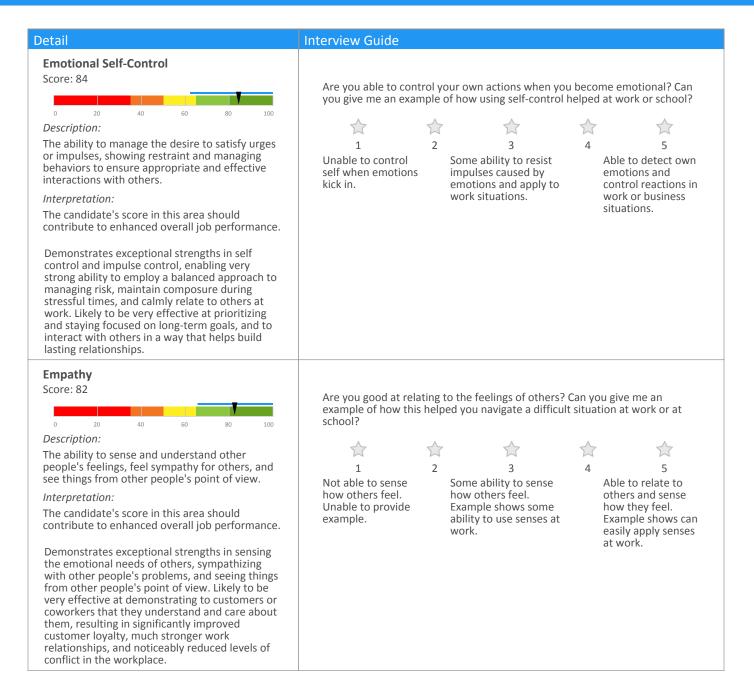

Emotional Intelligence Detail

This section contains a list of emotional intelligence characteristics that indicate how tuned in a candidate is to his or her own emotions, and those of others, as well as the candidate's ability to control his or her behavior in light of the emotions he or she is experiencing. These traits can often impact performance in groups or teams. Sample interview questions are provided to gather more information.

Identity Confirmation Photos

The following photos of the candidate and any identification were uploaded during the assessment session.

Photo Analysis Results							
- Risk:	Medium risk of cheating based on image inconsistencies						
- Percent match among processed faces	100%						
- Total images processed	17						
- Total images with valid faces	14 (82%)						
- Total pairs of faces compared	13						
- Pairs in which faces matched	13 (100%)

Minimum Qualification Guidelines - from O*Net

The following are suggestions from O*Net, the United States government's occupational information network, regarding prerequisites for this job type.

Item	
Educational Achievement	Bachelor's Degree
Job-Related Training	Less than 6 Months
Job-Related Experience	Less Than 1 Year

Report Preparation Notes

- Hiring decisions should never be based on a single source of information. The most effective use of this assessment report is as a part of a multi-faceted program of candidate evaluation that includes resume review, interviews, and reference checks.
- Overall vs Percentiles Scores: The overall score reflects the success in the test, based on the mean (average) and standard deviation of the test scores. The percentile score reflects the percentage of test-takers who scored equal or below this overall score. We recommend you use the Overall Score as your primary evaluation criteria. However, percentile scores can often be useful in comparing specific candidates against one another and with a group, such as for test takers in a certain organization or within a certain account.
- Note that comparison information is calculated based on completed instances of this assessment at that time the
 assessment is scored. As additional instances are completed, the comparative data may change. You can always update a
 report to the current values by clicking on "Recalculate Percentiles" within the online results viewing pages at
 www.hravatar.com.
- Most competency scores are norm-based, which means that they can be interpreted in terms of their distance from the average or mean score. For all scales, a score equal to the mean receives a score of 65 and scores above and below this value are set so that a score change of 15 equals one standard deviation.
- For linear competencies, higher is better across the entire scale. For these scales a score between 65 and 80 (light green) represents 0 to 1 standard deviation above the mean and a score above 80 (dark green) represents more than one standard deviation above the mean. Similarly, a score of 50 65 (yellow) represents 0 to 1 standard deviation below the mean, while a score of 35 50 (orange) equates to 1 to 2 standard deviations below the mean, and a score below 35 represents more than 2 standard deviations below the mean.
- This assessment makes use of data from the Occupational Information Network (O*NET), which is funded by the U.S.
 Federal Government U.S. Department of Labor/Employment and Training Administration (USDOL/ETA) as a primary source of occupational information. The O*NET database contains information on hundreds of standardized and occupation-specific descriptors that are continually updated by ongoing research. These data are used in preparing descriptive information as well as setting relative weights between competencies used in calculating the overall score. For additional information about O*NET, visit http://www.onetcenter.org.
- O*Net Standard Occupational Code (SOC) Used: 39-9032.00
- O*Net Version: 25.1
- Sim ID: 968-4, Key: 0-0, Rpt: 13, Prd: 430, Created: 2024-05-07 05:48 UTC

Score Calculation Detail

The following table provides a summary of how the overall score was calculated from the individual competency scores. Competency scores are calculated on a 0-100 scale by first calculating a Z statistic based on test-taker responses and then transforming the Z value to a scale with target mean and standard deviation. Certain competencies have a normal score distribution where it is best to be closest to the mean. For these competencies we modify the Z statistic by multiplying its absolute value by minus 1 for the overall score calculation. Next, to calculate the overall score, a weighted average of all modified competency Z statistics is computed and this weighted average is itself transformed to a Z statistic, which is then transformed to a score with the same target mean and standard deviation. Finally outlier scores are adjusted if they are below 0 or above 100.

Competency	Score	How applied to overall	Score Value Used	Weight (%)
Adaptable	68.8084	Z-Statistic	0.2539	4.7706
Attention to Detail	80.3479	Z-Statistic	1.0232	18.5319
